[NET HUNTERS]

[P. 209-B]

the use of poison for catching fish. The poison (KiBira: *matungu*) is prepared from the bark of the *atungo* tree, and has been known to blind people who get it in the eyes. Fish caught by the children are placed by them in leaves with salt and roasted on fire embers. Salt is obtained either from plantain skins, or in the *ido*, which are open, well-watered clearings found in the forest. Children also hunt rats and mice with their miniature bows and arrows.

Gathering

As with the archers, gathering is mostly the province of women and children (mainly women), though men will gather any edible food they happen to pass. Gathering is an individual rather than a collective activity. Gathering activities that require the climbing of high trees, such as the collection of most nuts, are undertaken by men, who also collect termites, silkworms, and honey. The contribution of children, though not organized, is appreciable.

The foods available are the same as those described by Schebesta. It appears that the net hunters make much fuller use of forest products, the most important of which are nuts, edible fungus, and edible roots, each of which can be subdivided into a number of different species, not only insuring a supply at all seasons, for each species has its own season, but also variety.
